Unit 2 Consolidation Task 1

Entity Relationship Diagram for a customer sales database containing information on customers, products and sales.

Customer Sales Database ERD

Notes on Cardinality:

- **Customer to Sale Header: One to Many (Optional)** - A customer can have multiple sales, but it is possible for a newly registered customer to have none yet.
- **Sale Header to Customer: One to One and Only One (Mandatory)**- A sale can be assigned to only one customer. Any valid sale must be linked to a customer.
- **Sale Header to Sale Detail: One to Many (Mandatory)** - A sale must have sale details (the items being purchased).
- **Sale Detail to Sale Header: One to One (Mandatory)** - A sale detail must be linked to the sale within which it is made. It can only be linked to one sale.

- **Sale Detail to Product: One to One and Only One (Mandatory)** - An order detail must be a product and can only be one product.
- **Product to Sale Detail: One to Many (Optional)** - A product may be included in multiple sales, and so can be assigned to multiple order detail entries. However, it is possible for a product to have no sales yet.
