

DATA MANAGEMENT TECHNOLOGIES

UNIT 1 – TASK 2: PART 1

TASK

Write a short paragraph (maximum 10 lines in Word) of the ways you think adopting a database perspective and a good design can simplify your own daily life and help you with organising things.

RESPONSE

A Database Perspective will be helpful for managing and handling amounts of information, particularly large collections that need to be accessed or modified frequently.

A good design should consider the characteristics and intricacies of the information held, and reflect these, for example, by being compatible with a variety of data types.

Practical Applications include:

- **Pantry Management System** - A database to hold information of items in a kitchen pantry (such as BBE date, price, and ambient storage temperature (i.e. cupboard/fridge/freezer)). It will be helpful for meal planning and shopping list preparation.
- **Personal Library Catalogue** – A database for a personal collection of books. (fields will include title, genre, author, hardback/softcopy, etc.)
