Unit 3 - Consolidation Task 1

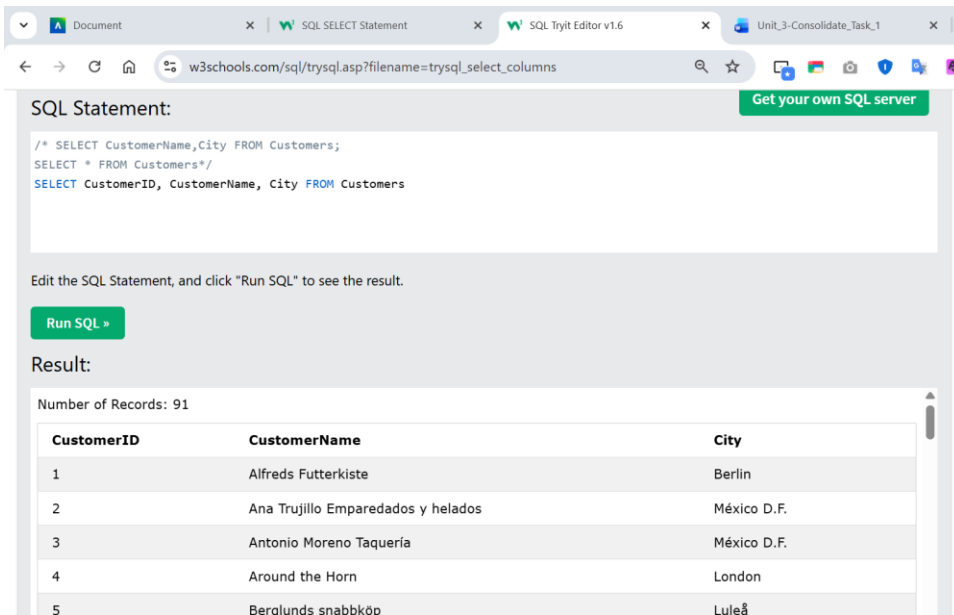

Complete the SQL Select section, including the embedded examples

Complete the SQL Select Distinct section, including the embedded examples

Explain the difference between a simple Select statement and a Select Distinct statement

SELECT SECTION

Selecting Specific Columns from Customers Table

The screenshot shows the W3Schools SQL Tryit Editor interface. The browser tabs include 'Document', 'SQL SELECT Statement', 'SQL Tryit Editor v1.6', and 'Unit_3-Consolidate_Task_1'. The address bar shows the URL 'w3schools.com/sql/trysql.asp?filename=trysql_select_columns'. The 'SQL Statement:' section contains the following code:

```
/* SELECT CustomerName, City FROM Customers;
SELECT * FROM Customers*/
SELECT CustomerID, CustomerName, City FROM Customers
```

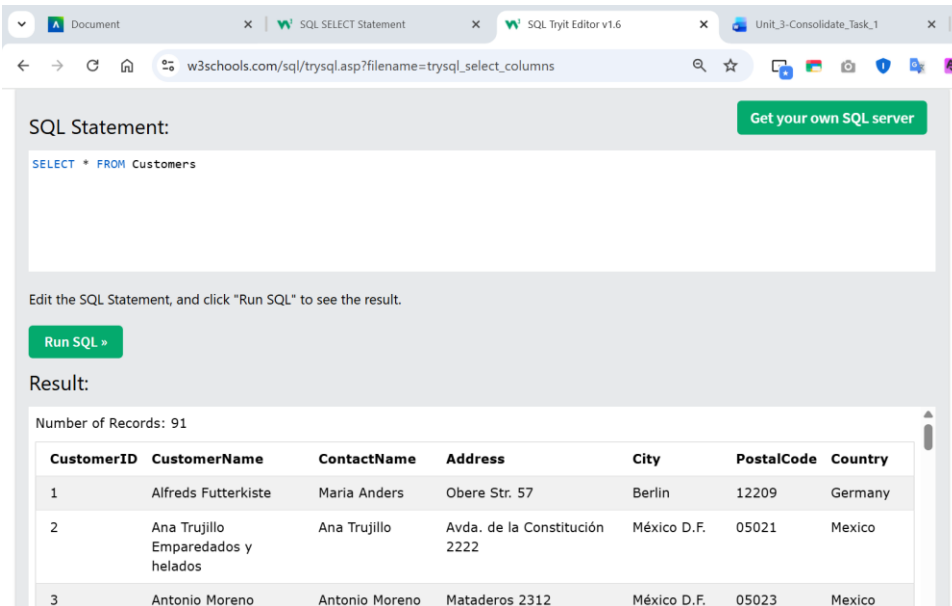

Below the code editor, there is a button labeled 'Run SQL »'. The 'Result:' section shows the output of the query:

Number of Records: 91

CustomerID	CustomerName	City
1	Alfreds Futterkiste	Berlin
2	Ana Trujillo Emparedados y helados	México D.F.
3	Antonio Moreno Taquería	México D.F.
4	Around the Horn	London
5	Berglunds snabbköp	Luleå

This command selects only the specified columns in the table. It includes duplicates.

Selecting All Columns from Customers Table

SQL Statement:

```
SELECT * FROM Customers
```

Edit the SQL Statement, and click "Run SQL" to see the result.

Run SQL »

Result:

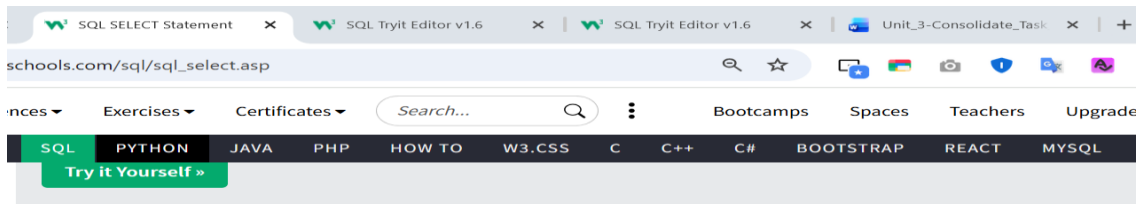

Number of Records: 91

CustomerID	CustomerName	ContactName	Address	City	PostalCode	Country
1	Alfreds Futterkiste	Maria Anders	Obere Str. 57	Berlin	12209	Germany
2	Ana Trujillo Emparedados y helados	Ana Trujillo	Avda. de la Constitución 2222	México D.F.	05021	Mexico
3	Antonio Moreno	Antonio Moreno	Mataderos 2312	México D.F.	05023	Mexico

This command prints all columns in the table

Exercise ?

What is the purpose of the SQL `SELECT` statement?

- ☐ To insert data into a database
- ☒ To select data from a database
- ☐ To delete data from a database
- ☐ To update data in a database

Submit Answer »

Q2

Document x SQL SELECT State x W3Schools Exerc x SQL Tryit Editor v1 x SQL Tryit Editor v1 x Unit_3-Consolidat

w3schools.com/sql/exercise.asp?x=xrcise_select2

Exercise: SQL Select

Insert the missing statement to get all the columns from the **Customers** table.

```
SELECT] * FROM Customers;
```

Show Answer

Q3

Document x SQL SELECT State x W3Schools Exerc x SQL Tryit Editor v1 x SQL Tryit Editor v1 x Unit_3-Consolidat x +

w3schools.com/sql/exercise.asp?x=xrcise_select3

Exercise: SQL Select

Write a statement that will select the **City** column from the **Customers** table.

```
SELECT City FROM Customers;
```

Show Answer

Q4

Document x SQL SELECT State x W3Schools Exerc x SQL Tryit Editor v1 x SQL Tryit Editor v1 x Unit_3-Consolidat

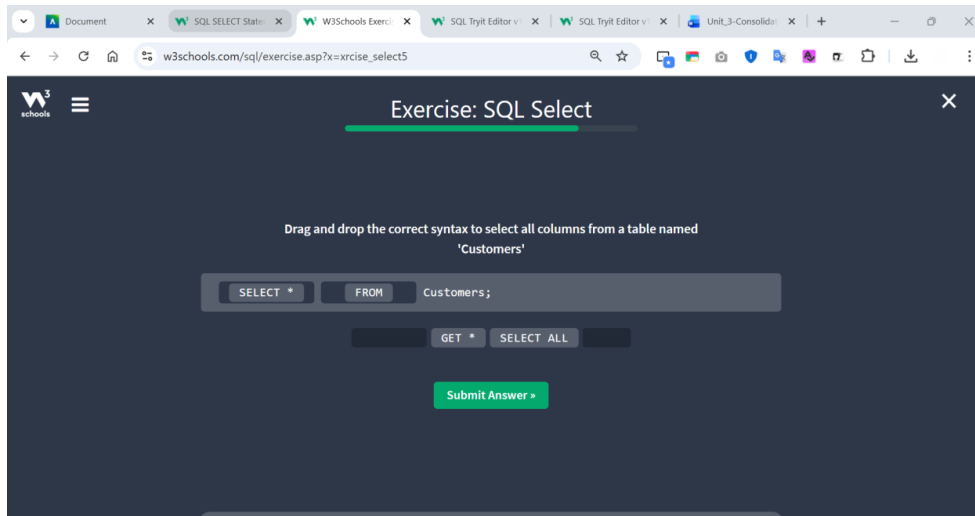

w3schools.com/sql/exercise.asp?x=xrcise_select4

Exercise: SQL Select

How would you select the 'CustomerName' and 'City' columns from a table named 'Customers'?

- ☐ SELECT CustomerName City FROM Customers;
- ☐ SELECT * FROM Customers;
- ☒ SELECT CustomerName, City FROM Customers;
- ☐ SELECT CustomerName AND City FROM Customers;

Q5

SELECT DISTINCT SECTION

This selects only the distinct (unique) values in the specified columns. In the example given, it prints the values in the country column. Every value is printed only once, even if it appears multiple times in the data.

SQL Statement:

SELECT DISTINCT Country FROM Customers;

Run SQL >

Result:

Number of Records: 21

Country
Argentina
Austria
Belgium
Brazil
Canada
Denmark

Completed SELECT DISTINCT section Quiz Screenshots:

Q1

Exercise [?]

Which of the following SQL statements would return a list of all unique countries from a table named 'Customers'?

- ☐ SELECT UNIQUE Country FROM Customers;
- ☐ SELECT Country FROM Customers;
- ☒ SELECT DISTINCT Country FROM Customers;
- ☐ SELECT * FROM Customers WHERE Country IS UNIQUE;

[w3schools.com/sql/exercise.asp?x=xrcise_distinct2](#)

Exercise: SQL Select Distinct

Select all the *different* values from the **Country** column in the **Customers** table.

```
SELECT DISTINCT Country FROM Customers;
```

[Show Answer](#)

Q3

Document x SQL SELECT DISTINCT St x W3Schools Exercise x SQL Tryit Editor v1.6 x Unit_3-Cc

w3schools.com/sql/exercise.asp?x=xrcise_distinct3

Exercise: SQL Select Distinct

What would be the result of omitting the **DISTINCT** keyword in a statement like **SELECT DISTINCT Country FROM Customers;**?

- ☐ It would result in an error
- ☒ It would return all values in the Country column, including duplicate values.
- ☐ It would remove all null values from the Country column
- ☐ It would sort the countries alphabetically

Q4

Document x SQL SELECT DISTINCT St x W3Schools Exercise x SQL Tryit Editor v1.6 x Unit_3

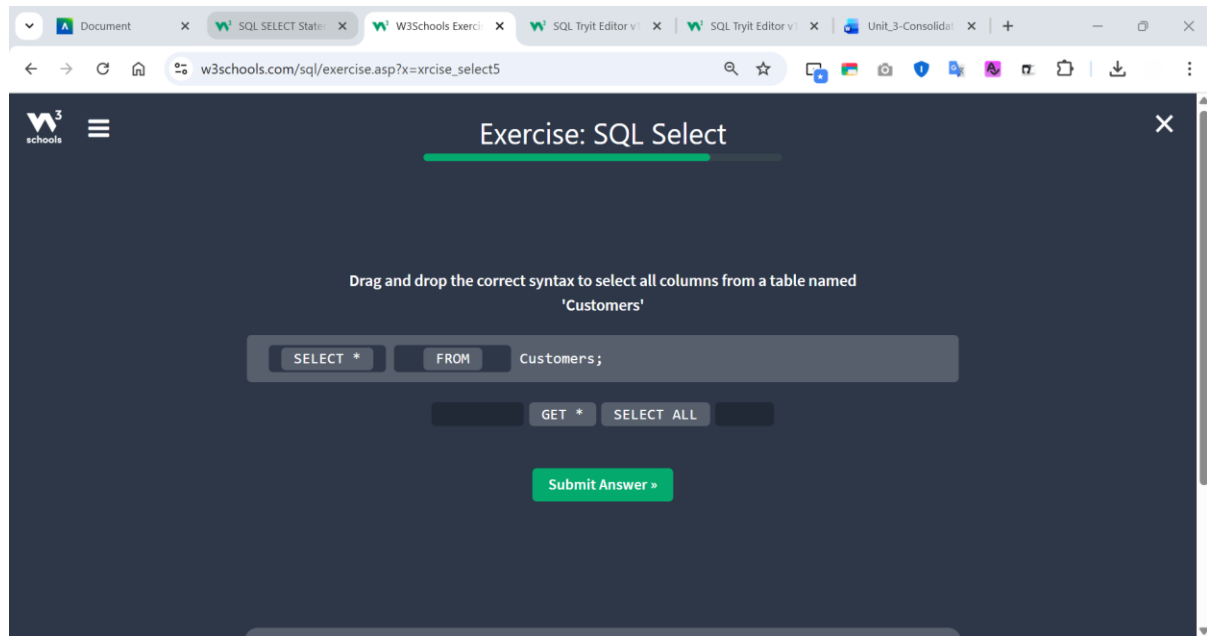

w3schools.com/sql/exercise.asp?x=xrcise_distinct4

Exercise: SQL Select Distinct

What does the following SQL statement do?
SELECT COUNT(DISTINCT Country) FROM Customers;

- ☐ Returns all countries in the Customers table, excluding the 10 first countries
- ☒ Returns the number of different countries in the Customers table
- ☐ Returns only the first 10 countries in the Customers table

Q5

DIFFERENCE

The SELECT command returns all values, based on the records in the data, including duplicate values. The SELECT DISTINCT command ignores duplicate values and returns each unique value only once.
